According to our (Global Info Research) latest study, the global Automotive Radar market size was valued at USD 5460.3 million in 2023 and is forecast to a readjusted size of USD 14970 million by 2030 with a CAGR of 15.5% during review period.

An automotive radar is used to locate objects, such as vehicles and pedestrians, in the vicinity of the car. A radar consists of a receiver and a transmitter. The transmitter sends out radio waves that hit an object and bounce back to the receiver. By controlling the direction in which radio waves are sent and received it is possible to detect objects' distance, speed and direction. This requires steerable antennas that can be automatically directed or receive signals simultaneously from several different directions.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
