Abstracts

According to our (Global Info Research) latest study, the global Automotive Radar SoC market size was valued at US\$ 432 million in 2025 and is forecast to a readjusted size of US\$ 1538 million by 2032 with a CAGR of 19.8% during review period.

Automotive Radar SoC is a highly integrated radar system-on-chip that incorporates RF front-end circuits, digital signal processing, and microcontroller functions on a single CMOS die, delivering compact architecture, low power consumption, and stable signal performance required for high-resolution angle radar and forward radar in automotive sensing. In 2025, production was approximately 9.33 million units and the average price was USD 45 per unit. The industry's capacity utilization rate in 2025 was about 60% and the average gross margin was around 55%. Upstream, the most critical inputs include silicon wafers, photoresists, lithography machines, and etching tools, with representative suppliers such as ASML, Tokyo Electron, and Applied Materials providing essential semiconductor equipment and materials. The midstream segment includes system architecture design, RF front-end and baseband integration, digital signal processing, mixed-signal verification, and SoC-level functional integration, which collectively determine computational capability, radar performance, and overall integration level. Downstream, Automotive Radar SoC is used by angle radar and forward radar manufacturers such as Bosch, Continental, Aptiv, Valeo, Denso, ZF, and Huawei.

In the process of the evolution of automobiles to a higher level of intelligence, traditional millimeter-wave radars can no longer meet the needs. Its perception information only contains distance and orientation, lacking height parameters, and cannot form high-density point cloud imaging, which makes it difficult to identify road targets. Although

lidar with high-density point cloud imaging capability can solve the pain points of traditional millimeter-wave radar, the cost of lidar on the car is high, and there are natural defects that cannot work around the clock. Therefore, 4D imaging radar has attracted the attention of the industry.
