## Abstracts

The global Automotive Rear View Vision System market size is expected to reach \$ 14420 million by 2029, rising at a market growth of 5.7% CAGR during the forecast period (2023-2029).

Automotive Rear View Vision System market is driven by the increasing demand for advanced safety features and the growing automotive industry. The incorporation of multifunctional features such as blind spot monitoring, turn signal indicators, and parking assistance in side view mirrors has contributed to the growth of the market. Additionally, the increasing production and sales of passenger cars, particularly in developing countries, have boosted the demand for side view mirrors.

Automotive Rear-view Mirror is a mirror in automobiles, designed to allow the driver to see rearward through the vehicle's backlight. It is an important auto part in vehicles for the safety of drivers. The mirror is not ground flat -- the front glass surface is at an angle to the back (mirrored) surface. So if you looked at this mirror out of its casing, it would be wedge-shaped with the thicker edge at the top.
