Abstracts

Automotive refinish coatings refer to polyurethane, acrylics or alkyd-based coatings used by vehicle body shops and repair centers. These coatings are applied to new/old passenger and commercial vehicles to cover up the damages on the body caused by extreme temperatures, accidents and impact from stones. Some of the commonly used refinish coatings include primer, filler, topcoat, basecoat and activator or hardener coatings. They are either solvent-borne, water-borne or ultraviolet (UV) cured. Among these, water-borne coatings have lower levels of volatile organic compounds (VOCs) than solvent-borne variants, thereby making them highly effective for all automobiles.

This report studies the global Automotive Refinish Coatings production, demand, key manufacturers, and key regions.
