According to our (Global Info Research) latest study, the global Automotive Resettable PPTC Fuse market size was valued at US\$ 86.48 million in 2025 and is forecast to a readjusted size of US\$ 109 million by 2032 with a CAGR of 3.4% during review period.

Polymer Positive Temperature Coefficient (PPTC) resettable fuses are advanced circuit protection devices that safeguard electronic circuits against overcurrent conditions. Unlike traditional fuses, which require replacement after a single event, PPTC fuses can reset themselves once the overcurrent is removed. These fuses operate based on a positive temperature coefficient (PTC) mechanism. Under normal conditions, they maintain low resistance, allowing current to flow with minimal voltage drop. When an overcurrent occurs, the device heats up due to increased current, causing the polymer matrix to expand. This expansion raises the resistance exponentially, significantly reducing the current flow to safe levels. After the overcurrent condition is resolved and the fuse cools, it automatically returns to its original state. In automotive systems, PPTC fuse can provide overcurrent protection and are widely used in motor circuit protection, sensors & actuator, car infotainment system, ADAS and telematic system.

PPTC resettable fuses have become essential components in the automotive industry, driven by their long-term reliability and ability to enhance the safety and performance of electric vehicles (EVs), hybrid vehicles, and traditional internal combustion engine vehicles. Major automakers, including Tesla, Ford, Hyundai/Kia Motors, and BYD, are increasingly incorporating these advanced fuses into their designs to protect critical electronic systems. The market outlook for Automotive Resettable PPTC Fuses is positive.
