## Abstracts

According to our (Global Info Research) latest study, the global Automotive Selective Catalytic Reduction Carrier market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Automotive selective catalytic reduction (SCR) carrier is a technology used for diesel engine emission control. It mainly converts nitrogen oxides (NOx) into harmless nitrogen and water by introducing a reducing agent (usually a urea solution) into the catalyst. The SCR carrier is a special substrate used to support the catalytic reaction of the catalyst, usually a ceramic or metal material. The SCR system injects urea into the exhaust system to react with NOx, and under the action of the SCR catalyst, it is reduced to harmless nitrogen and water vapor
