According to our (Global Info Research) latest study, the global Automotive Smart Corner Module market size was valued at US\$ 64.56 million in 2025 and is forecast to a readjusted size of US\$ 111 million by 2032 with a CAGR of 8.2% during review period.

The intelligent steering angle module (ICM) is a next-generation technology that integrates the drive, braking, steering, and suspension systems into each wheel of a vehicle. This is the secret to driving in a completely different way than existing cars. Currently, car wheels move by receiving power from drive linkages (constant velocity joints) mounted on the body. The direction of travel is also changed by steering gears and linkages connected to the body. In recent years, companies such as Continental, Hyundai Mobis, and Protean Electric have increased their investment and have already commercialized the ICM. In 2024, the production volume of the ICM was approximately 49,840 units, with a unit price of approximately \$996 per unit.

As a crucial component of modern automotive intelligence, intelligent corner modules are gaining increasing attention alongside the rapid development of autonomous driving technology and intelligent transportation systems. With consumers' growing demands for vehicle safety and convenience, intelligent corner modules are playing an increasingly significant role in enhancing vehicle perception, improving the driving experience, and raising road safety. Integrating multiple sensors and cameras, intelligent corner modules enable real-time monitoring and data analysis of the vehicle's surroundings, providing more accurate navigation and obstacle avoidance capabilities. Furthermore, with the development of vehicle-to-everything (V2X) technology, intelligent corner modules can also interact with other vehicles and infrastructure, further improving traffic efficiency and safety. However, the market also faces challenges such

as inconsistent technical standards, cost control, and data security. As the technology matures and the market expands, intelligent corner modules are expected to occupy an even more important position in the future automotive market, becoming a key factor driving the development of automotive intelligence.
