Abstracts

A vehicle's window film will protect skin from the harmful UV rays of the sun that can lead to skin discoloration or even melanoma. In addition to the protection you get to your skin, auto window tint protects the interior of your vehicle. Just like Ultraviolet light can discolor and damage your skin, it can do the same to your vehicle's interior. Harmful ultraviolet (UVA) rays that contribute to premature aging and skin cancer can penetrate through unprotected automobile glass – whether it's a sunny day or not. Professionally installed window film blocks up to 99% of UV rays from passing through unprotected glass. Solar Control Window Films is a highly engineered, optically clear, polyester film composite. It undergoes various treatments to provide safety, security, solar control and decorative enhancements for transportation glazing. Window Film can alleviate many solar control issues whilst retaining the view through the window. They are non-disruptive to install and maintain, and require no human intervention to operate.
