According to our (Global Info Research) latest study, the global Automotive Specification Transient Voltage Suppression Diode market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Automotive-grade transient voltage suppression diodes are semiconductor devices used to protect automotive electronic equipment from transient overvoltage. Automotive-grade TVS diodes need to comply with AEC-Q101 standards and have high reliability and stability. The working principle of the automotive-grade TVS diode is: when the circuit is working normally, it is in a high-impedance state and does not affect the normal operation of the line; when the circuit suffers a high-energy instantaneous overvoltage pulse, its impedance will rapidly decrease, reducing the overvoltage. Shunt current from the protected circuit to effectively protect precision components in electronic circuits from damage.
