## **Abstracts**

According to our (Global Info Research) latest study, the global Automotive Spinning Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

An automotive spinning machine is a type of machine used in the automotive industry to shape and form metal parts. It is commonly used to create cylindrical or conical shapes by rotating a metal blank against a spinning tool. The spinning tool exerts pressure on the metal blank, causing it to deform and take the desired shape. This process is often used in the production of components such as exhaust pipes, fuel tanks, and wheel rims. The automotive spinning machine allows for precise control over the shaping process and is an efficient method for producing complex metal parts.
