According to our (Global Info Research) latest study, the global Automotive Engine Oil Coolant market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Automotive engine oil coolant primarily is used to keep the engine temperatures in control and thus avoid overheating of the engine, and eventual engine seize. The automotive engine oil coolant absorbs heat from the engine eventually dissipating it to the engine radiator. The oil coolant also helps in protecting the inner surfaces of the different metal components that are continuously exposed to friction and heat, from rusting or corrosion. Thus the engine oil coolant serves the dual purpose of cooling the engine and rust protection

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
