## Abstracts

The global Automotive Sub-Frame market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Sub-Frame is a device between suspension connecting components and body, its function is to obstruct vibration and noise, to reduce them transfer into carriage directly, which is very important for riding comfort and controllability. Vehicle without Sub-frame, suspension parts (Links, Shock absorber, Spring, etc.) connect with body directly. The vibration between vehicle and ground directly transfer to body through suspension parts, which will influence riding comfort. With Sub-frame, suspension parts connecting with Sub-frame, vibration can be buffered before transferring to body, to reduce vibration significantly and to promote riding comfort. In addition, as the stiffness of sub-frame is stronger than body, with sub-frame connecting, suspension's coupling stiffness got upgraded as well. Therefore, Sub-frame configuration promote not only riding comfort, but also chassis strength and controllability.
