## Abstracts

The global Automotive market size is expected to reach \$ 3461433 million by 2032, rising at a market growth of 3.0% CAGR during the forecast period (2026-2032).

In 2025, global automotive production reached 91.7 million vehicles, with an average selling price of US\$30,000 per vehicle. Automotives generally refer to non-rail-borne vehicles driven by electricity and having four or more wheels, primarily used for transporting people or goods. The upstream of the automotive industry chain includes steel, aluminum, copper, plastics, rubber, glass, textiles, and chemical materials, as well as chips, power semiconductors, battery materials, battery cells, motors, and various components; the midstream consists of OEM (Original Equipment Manufacturer) vehicle manufacturers; and the downstream covers personal commuting, family travel, urban delivery, long-haul logistics, engineering transportation, and public utility services. Gross profit margins range from 5% to 25%.

The automotive industry is no longer simply a structure dominated by Europe, the US, and Japan, with other regions following suit. It has evolved into a multi-center pattern: Asia as the main production hub, North America focusing on high-value vehicles, Europe with stringent regulations, and India and Southeast Asia absorbing new growth. ACEA data shows that in 2024, global passenger vehicle production reached 75.5 million units, with Asia accounting for 60.6%, Europe 19.1%, and North America 15.0%; China accounted for 35.4% of global passenger vehicle production. This indicates that the center of gravity of global vehicle manufacturing has shifted significantly eastward, while Europe and North America maintain their influence primarily in high-value vehicles, brands, regulations, and technical standards.

This report studies the global Automotive production, demand, key manufacturers, and

key regions.
