The global Automotive Surrounding Camera market size is expected to reach \$ 6578.4 million by 2029, rising at a market growth of 22.4% CAGR during the forecast period (2023-2029).

The automotive surrounding camera market refers to the industry involved in the production, distribution, and installation of camera systems that provide a 360-degree view around vehicles. These camera systems, commonly known as surround-view cameras or bird's-eye view cameras, help drivers navigate and maneuver their vehicles safely, especially in tight spaces or during parking.

Automotive surrounding camera systems typically consist of multiple cameras strategically placed around the vehicle. These cameras capture video footage of the surroundings, which is then processed and stitched together to provide a comprehensive view. The system may also include sensors, control units, and display screens to present the stitched video to the driver.

An automotive surrounding camera module is a device used in modern vehicles to capture images of the area surrounding the vehicle. It typically consists of multiple cameras located on different parts of the vehicle, such as the front, rear, sides, and even under the vehicle. The cameras are connected to the vehicle's onboard computer, which processes the images to provide information to the driver and to assist in the operation of various safety systems.
