Chassis Air Suspension ECU is responsible for regulating the air pressure in the air springs, thereby controlling the vehicle's ride height, comfort, and handling characteristics. Chassis Air Suspension ECU ensures that the vehicle maintains optimal balance and stability under varying load conditions and road surfaces.

Today the majority of new cars in the luxury and upper middle class range, including some Sport Utility Vehicles (SUVs) , have air suspension. The volume of the air in the air cushions in all corners of the car can be controlled. This is done by controlling the flow of the air in and out of the additional air reservoirs. The system includes a special air compressor, one or two air reservoirs, four shock absorber units with air springs and traditional shock absorbers, 2 to 5 stand-alone accelerometers and the electronic control unit (ECU) .
