Abstracts

Automotive thermal management technologies are primarily used for reducing fuel emissions and improving passenger comfort. Its major functions include reducing thermal loads, transferring heat efficiently, and reusing of waste heat. An automotive thermal management monitors and controls the operating temperature of various automobile systems such as power electronics, battery, electric drive units, engine, transmission, and passenger cabin area to improve the efficiency and prevent damage to the components.

SCOPE OF THE REPORT:

This report focuses on the Automotive Thermal Management in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
The study estimates reduced HVAC system loading technology as the fastest-growing market. The use of the HVAC system loading technology is expected to result in an increase in the fuel economy of a vehicle, less wear and tear of the engine, reduction in environmental pollution, and increased engine performance. Hence, in the future, the adoption of this technology can be seen in the vehicles.

The worldwide market for Automotive Thermal Management is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US$ in 2023, from xx million US$ in 2017, according to a new GIR (Global Info Research) study.
