Abstracts

According to our (Global Info Research) latest study, the global Automotive Tire Changer market size was valued at US\$ 552 million in 2025 and is forecast to a readjusted size of US\$ 762 million by 2032 with a CAGR of 4.6% during review period.

In 2025, global production of automotive tire changers reached 142,000 units, with an average selling price of US\$3,780 per unit. Automotive tire changers are specialized workstation equipment for automotive repair and tire service scenarios. Their core task is to safely and controllably remove tires from rims and reassemble them, while simultaneously performing key actions such as pressing tire beads, breaking tire beads, tire installation/removal, and inflation alignment. This minimizes the risks of rim scratches, tire bead tears, TPMS (tire pressure monitoring system) damage, and workplace injuries. They are used in tire chain/independent auto repair shops, 4S/dealer after-sales service, fleet and rental maintenance centers, commercial vehicle maintenance points, and the rapidly growing mobile on-site tire change service. The upstream of the industry chain includes structural components and key electromechanical parts: steel plate/profile welded frames, turntables and grippers, pneumatic/hydraulic actuators (cylinders, valve islands, oil cylinders), motors and reduction mechanisms, sensors and controllers, human-machine interfaces and foot/touch control components, as well as high-polymer wear-resistant parts related to wheel rim protection (plastic mounting heads, rollers, sleeves); the midstream is complete machine assembly, tooling calibration, and safety certification; the downstream targets tire chains/independent auto repair shops, 4S/dealer after-sales service, fleet and rental maintenance centers, commercial vehicle maintenance points, etc. Gross profit margin is approximately 20%–40%.
