Abstracts

According to our (Global Info Research) latest study, the global Automotive Tire Tread Depth Scanner market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A tire tread depth scanner is a specialized instrument used to measure the depth of tread on tires, which is the grooved pattern on the tire's surface that provides traction and grip on the road. The scanner uses a laser or light source to illuminate the tire's surface and a sensor to detect the changes in light intensity as the laser beam passes through the tread grooves. The resulting data is then used to calculate the depth of the tread grooves and the overall condition of the tire. Tire tread depth scanners are commonly used by automotive technicians, mechanics, and enthusiasts to assess the remaining life of a tire and ensure optimal performance and safety on the road.
