The global Automotive Traction Motor Core market size is expected to reach \$ 10805 million by 2032, rising at a market growth of 13.8% CAGR during the forecast period (2026-2032).

In 2025, the global production of Automotive Traction Motor Core reached approximately 38,093.3 K units, with an average price of US\$ 108.1 per unit.

The traction motor in electric vehicle is responsible for converting the electric energy to mechanical energy which is used in propulsion of vehicle in a straight-line motion. Electric vehicle traction motor is used in electrical transmission system like electric hybrid vehicles and battery powered electric vehicles. Inside every electric motor is a stationary stator with a rotor spinning inside it. The stator is made of copper wire coils. When an electric current flows through these coils, a rotating magnetic field is created in the stator which causes the rotor to spin. The rotational movement is based on a simple physical principle: opposite poles in a magnet attract each other, whereas like poles repel. Consisting of a stator and a rotor, a motor core plays a pivotal role in generating electricity within a motor.

Governments around the world are offering subsidies, tax rebates, and incentives to promote the adoption of EVs, which directly boosts the demand for automotive drive motor cores. Emerging economies, particularly in Asia-Pacific and Latin America, are experiencing increased EV adoption. Governments in these regions are implementing policies and infrastructure improvements that support the growth of EVs, creating new opportunities for motor core manufacturers.

The expansion of EV models, including sedans, SUVs, trucks, and even commercial vehicles, is driving diverse demand for motor cores across different vehicle segments. As the EV market diversifies, there is growing demand for customized motor cores tailored to specific vehicle segments, such as luxury EVs, commercial vehicles, and even electric motorcycles. Offering specialized solutions for these segments can

capture niche markets and increase revenue streams.

Continuous innovation in motor technology, including improvements in efficiency, power density, and performance, drives the demand for advanced drive motor cores. The use of advanced materials like silicon steel and amorphous metals improves the magnetic properties of motor cores, resulting in better energy efficiency and reduced energy losses.

The global key manufacturers of Automotive Traction Motor Core include Mitsui High-tec, EUROTRANCIATURA, POSCO, Suzhou Fine-stamping, Hidria, Tempel Steel, Wuxi Longsheng Technology, Yutaka Giken, R.Bourgeois, Huaxin Precision, etc. In 2025, the global top five players had a share approximately 61.64% in terms of revenue.
