Abstracts

According to our (Global Info Research) latest study, the global Automotive Transceivers market size was valued at USD 4268.2 million in 2023 and is forecast to a readjusted size of USD 5445.4 million by 2030 with a CAGR of 3.5% during review period.

Because of the increasing demand for data exchange in modern vehicles, the automotive industry implemented networks like CAN (Controller Area Network), LIN (Local Interconnect Network) and FlexRay protocol-based bus systems. In the future, cars will have more electronic control units (ECUs) which will feature an even higher level of functionality. Therefore, the importance of in-vehicle networking devices increases due to the larger quantity of data exchanged between the ECUs. As a result the automotive industry newly established the CAN FD (Flexible Data-rate) protocol for faster CAN communication up to 5Mbit/s and CAN PN (Partial Networking) for improved energy efficiency.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest

automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
