Abstracts

The global Automotive Transmission Filter market size is expected to reach \$ 1506 million by 2032, rising at a market growth of 2.8% CAGR during the forecast period (2026-2032).

The transmission filter is a vital part of that system and is situated above the transmission pan, which catches any excess fluid, and below a pickup tube that connects to the oil pump, which regulates the pressure of fluid in the transmission. The transmission filter functions as a sieve to collect contaminants like dirt and debris before sending lubricating fluid to the transmission itself. Although every vehicle has its own optimal maintenance needs that can usually be located in the owner's manual, the general consensus among mechanics is that the transmission filter and fluid should be replaced every 25,000 miles.

Global Automotive Transmission Filter key players include Mann-Hummel, MAHLE, Cummins Filtration, Toyota Boshoku, Fram Group, etc. Global top five manufacturers hold a share about 55%. Europe is the largest market, with a share about 30%, followed by North America and China, both with a share about 20 percent. In terms of product, OEM is the largest segment, with a share about 75%. And in terms of application, the largest application is Passenger Vehicle, followed by Commercial Vehicle, etc.
