According to our (Global Info Research) latest study, the global Automotive Tuner ICs market size was valued at US\$ 533 million in 2024 and is forecast to a readjusted size of USD 1023 million by 2031 with a CAGR of 9.9% during review period.

Automotive Tuner ICs are tunable Radio Frequency (RF) receivers that extract signal from standard channels for automobile applications. Manufacturers offer automotive tuner ICs for digital radio, navigation and digital TV. These automotive tuner ICs range from economical and single tuner designs to premium and multi-tuner ICs for car radio systems.

Car tuner IC (Integrated Circuit) is a circuit chip used in car radios. It is a specially designed integrated circuit, usually consisting of multiple analog and digital circuit modules, used to tune, amplify and demodulate radio signals received by a car radio. Car tuner ICs work by converting received high-frequency radio signals into low-frequency signals, which are then amplified and demodulated to produce audible audio signals. Different car tuner ICs have different frequency ranges and bandwidths and can receive different types of radio signals, such as FM radio, AM radio, and satellite radio.
