Automotive UV Rejection Window Film is a functional film applied to vehicle windows to block ultraviolet radiation, reduce interior fading, improve passenger comfort, and support heat insulation performance. It is usually made from polyester substrate, UV absorbers, nano ceramic materials, metalized layers, adhesives, and scratch-resistant coatings for automotive glass applications.

The industrial chain of Automotive UV Rejection Window Film covers upstream materials such as PET films, UV absorbers, adhesives, release liners, ceramic particles, coating chemicals, and packaging materials. The midstream consists of film coating, lamination, curing, slitting, optical testing, durability testing, and product packaging. Downstream applications mainly include automotive aftermarket installation, vehicle beauty stores, car dealers, fleet maintenance, and OEM glass protection solutions.

Growing focus on driving comfort and interior protection promotes the development of automotive UV rejection window film. It can effectively block ultraviolet rays, reduce heat radiation and protect car interiors from aging damage. Upgrading of light transmission performance and environmental friendly materials further improves user experience.
