According to our (Global Info Research) latest study, the global Automotive Vacuum Valve market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A vacuum valve is a device that directs the flow of air or fluid to create a vacuum. Vacuum valves are operated inside machinery that use gauges and switches to control the flow of air or pressure inside the valve and release the pressure when needed for its application. The valve is opened by the operator with the use of the switch mechanism.

Vacuum valves can be found in cars using vacuum pressure for different controls and applications in the vehicle. The vacuum valves that work inside of a car are similar in function to larger vacuum valves found in industrial machines.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
