The global Automotive Valve Spring market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Automotive Valve Spring is a mechanical component used in the internal combustion engine of a vehicle. It is responsible for ensuring that the valve closes properly after it has been opened by the camshaft, allowing the engine to operate efficiently and smoothly. The valve spring is made of high-quality steel wire and is designed to withstand high temperatures and pressures.

The upstream industry chain of Automotive Valve Spring includes the production of steel wire and the manufacturing of valve spring production equipment. The downstream industry chain includes the assembly of the valve spring with other engine components, such as the camshaft and cylinder head.

This report studies the global Automotive Valve Spring production, demand, key manufacturers, and key regions.
