Abstracts

The global Automotive Vehicle to Everything (V2X) Communications market size is expected to reach \$ 13890 million by 2032, rising at a market growth of 19.8% CAGR during the forecast period (2026-2032).

Vehicle-to-Everything (V2X) communication is a core technology of intelligent transportation systems. By enabling real-time data exchange between vehicles (V2V), vehicles and infrastructure (V2I), vehicles and pedestrians (V2P), and vehicles and networks (V2N), it enhances traffic safety, optimizes traffic flow, and reduces emissions.

Market Overview: V2X communication technology aims to achieve real-time information exchange through On-Board Units (OBUs) and Roadside Units (RSUs), thereby improving vehicles' understanding of their surroundings and enhancing the reliability of autonomous driving. Currently, North America and China have largely agreed to adopt C-V2X as the de facto V2X communication protocol, phasing out DSRC. However, Europe remains divided between DSRC and C-V2X, though many companies have developed solutions compatible with both protocols.

Future Trends: In the future, V2X communication technology will evolve toward greater intelligence and integration. With the widespread adoption of 5G technology, the speed and stability of V2X communication will be significantly enhanced. Additionally, the integration of artificial intelligence (AI) technology will enable V2X systems to handle more complex traffic scenarios, providing more precise predictions and decision-support capabilities, thereby driving the development of intelligent transportation systems and smart cities.
