Abstracts

This report studies the Automotive Venting Membrane market, ePTFE Membrane has been widely used in automotive applications with a unique microporous structure. It comprises small randomly connected fibrils that render an effective pore size many times smaller than can be seen by the naked eye. Venting membrane microporous films are naturally hydrophobic and can be used as permeable water barriers for venting or breather filters for gas sensors, electronics and more.

Automobiles come equipped with complex electrical systems and devices, such as front and rear lights, in-car electronics, among many other key parts. ePTFE Membrane protect these sensitive components from condensation, heat dissipation, low air-flow issues, and more.

The report analysis venting membrane ready to use product. (Molded plastic cap is not covered in the report as product)

Scope of the Report:

ePTFE membranes has been discovered for decades as a competitive packaging and protecting solution. Currently, cost is the main issue influence the industry. With high technical barriers, ePTFE manufacturers holds higher than 35% gross profit. It is foreseeable that ePTFE venting materials would be prevailing in developing countries when more companies enter into the industry.

The worldwide market for Automotive Venting Membrane is expected to grow at a CAGR of roughly 4.4% over the next five years, will reach 200 million US\$ in 2023, from 160 million US\$ in 2017, according to a new GIR (Global Info Research) study.
