According to our (Global Info Research) latest study, the global Automotive Water Valves market size was valued at USD 1109.2 million in 2023 and is forecast to a readjusted size of USD 1250.1 million by 2030 with a CAGR of 1.7% during review period.

Automotive water valves are used to switch the different cooling water circuits on and off.

Optimization of the interior temperature of the vehicle in conjunction with best possible control of the heat input and cooling of the engine and its partial circulatory systems are achieved through successful thermal management. Water valves help to selectively control and regulate water circuit temperatures at central points. As a result, for example, the warm-up phase can be significantly reduced, thus saving fuel and reducing CO2 emissions.
