Abstracts

According to our (Global Info Research) latest study, the global Automotive Wet Friction Plates market size was valued at US\$ 2203 million in 2025 and is forecast to a readjusted size of US\$ 2768 million by 2032 with a CAGR of 3.4% during review period.

Automotive wet friction plates are core friction-transmission components used in automatic transmissions, wet clutches, hybrid transmissions and AWD coupling systems. They are typically made by bonding or integrating paper-based, carbon-based, non-woven fiber, sintered metallic or molybdenum-coated friction materials onto a steel core plate. Operating in ATF or dedicated lubricating oil, they work together with separator/reaction plates to transmit torque, control clutch engagement, enable gear shifts, provide brake holding and dissipate heat. Upstream inputs include cellulose fibers, aramid/carbon fibers, phenolic resins, elastomers, graphite, friction modifiers, metal powders, specialty steel plates and transmission fluids. Downstream applications include AT, CVT, wet DCT, DHT, HEV/PHEV disconnect clutches, torque-converter lock-up clutches, transfer cases, AWD couplings and limited-slip differentials.

In 2025, global automotive wet friction plates production reached approximately 1.9 billion units, with an average global market price is \$1.1 per unit.
