## Abstracts

According to our (Global Info Research) latest study, the global Automotive Wireless Phone Charging Modules market size was valued at USD 190.4 million in 2023 and is forecast to a readjusted size of USD 356.5 million by 2030 with a CAGR of 9.4% during review period.

Automotive wireless phone charging modules are devices that allow users to wirelessly charge their mobile phones in their vehicles. These modules are designed to be easily installed in a vehicle's dashboard or center console, providing a convenient way for drivers and passengers to charge their phones without the need for wired connections.

The main components of an automotive wireless phone charging module include a transmitter coil, a power supply, and a control circuit. The transmitter coil is responsible for generating a magnetic field that can transfer power to a receiver coil in the mobile phone. The power supply provides the necessary power to the transmitter coil, and the control circuit manages the charging process, ensuring that the phone is charged safely and efficiently.

Automotive wireless phone charging modules are compatible with most modern mobile phones that support wireless charging technology. Users simply place their phones on the module's charging surface, and the magnetic field generated by the transmitter coil charges the phone's battery.

The core technology of the vehicle-mounted mobile phone wireless charging module is wireless charging technology, including electromagnetic induction technology, electromagnetic resonance technology and electric field coupling technology. With the

continuous advancement of these technologies, the performance of in-vehicle mobile phone wireless charging modules will be further improved, such as increasing charging speed, reducing charging temperature rise, optimizing user experience, etc. These technological advances will further promote the growth of the automotive mobile phone wireless charging module market. With the improvement of automobile electronics, in-vehicle mobile phone wireless charging modules will be further integrated and intelligent. In the future, in-vehicle mobile phone wireless charging modules may be integrated with in-vehicle infotainment systems, navigation systems, etc. to form a more intelligent in-vehicle ecosystem. At the same time, the functions of the in-vehicle mobile phone wireless charging module will also be more diversified, such as wireless data transmission, vehicle status monitoring and other functions.
