## Abstracts

The global Automotive Wiring Harness Corrugated Tubes market size is expected to reach \$ 990 million by 2032, rising at a market growth of 3.5% CAGR during the forecast period (2026-2032).

Automotive wiring harness corrugated tubes are flexible protective conduits manufactured from polypropylene, polyamide, polyethylene and other engineering thermoplastics through continuous extrusion and in-line corrugation. They are installed around automotive wires, cables and wiring harnesses to provide lightweight protection while accommodating curved and compact routing paths. The corrugated crest-and-valley profile combines flexibility, compression resistance and impact strength, helping protect wiring against vibration-induced abrasion, mechanical impact, repeated bending, automotive fluids, mud, water, dust, ultraviolet exposure and temperature extremes. Products are available in slit, non-slit and reclosable configurations. Major upstream materials include PP, modified PP, PA6, PA66, PA12, PE, TPE, TPU and high-temperature polymers, together with flame retardants, heat stabilizers, UV stabilizers, impact modifiers and color masterbatch. Downstream customers include wiring-harness manufacturers, automotive Tier 1 suppliers and vehicle OEMs, with applications in body, cabin, engine-compartment, chassis, battery, high-voltage, sensor and ADAS harnesses.

In 2025, global automotive wiring harness corrugated tubes production reached approximately 3 million kilometers, with an average global market price is \$250 per kilometer.
