## Abstracts

According to our (Global Info Research) latest study, the global Automotives Pure Solid State Blind Spot LiDAR market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The characteristic of pure solid-state lidar is that there are no moving parts inside. Light emission and reception are completely completed through the chip. The total number of components is greatly reduced compared with traditional lidar, thus greatly improving detection performance and product reliability. In addition, due to its highly integrated architecture, pure solid-state lidar can be relatively compact and can be easily installed on the front and rear fenders, doors or front of the car. Blind-filling radar makes up for the areas not covered by long-range lidar.
