Abstracts

The global Automotives Pure Solid State Blind Spot LiDAR market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The characteristic of pure solid-state lidar is that there are no moving parts inside. Light emission and reception are completely completed through the chip. The total number of components is greatly reduced compared with traditional lidar, thus greatly improving detection performance and product reliability. In addition, due to its highly integrated architecture, pure solid-state lidar can be relatively compact and can be easily installed on the front and rear fenders, doors or front of the car. Blind-filling radar makes up for the areas not covered by long-range lidar.
