## Abstracts

According to our (Global Info Research) latest study, the global Autonomous Cars Chip market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Autonomous Cars Chip market fall into four categories. The first is microcontrollers for traditional automotive features like emissions control and antilock brakes, an arena dominated by NXP and Renesas. Second are the wireless modem chips connecting cars to the internet, with Intel and Qualcomm as the big players. Then there are two categories for autonomous features: chips for the cameras and sensors that give a self-driving car 'eyes,' and the processing chips that serve as the artificial 'brains.' Mobileye is a big player on the sensor side, while Intel and Nvidia power AI features for companies like Waymo and Tesla.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
