According to our (Global Info Research) latest study, the global Autonomous Driving Simulation Platform market size was valued at US\$ 1272 million in 2025 and is forecast to a readjusted size of US\$ 1792 million by 2032 with a CAGR of 4.4% during review period.

An autonomous driving simulation platform is a virtual testing system that accurately recreates the real driving environment in the digital world. Its core value lies in enabling autonomous driving systems to "directly hit the road" in a virtual city, experiencing a vast array of diverse road, weather, and traffic scenarios. This fundamentally solves the bottlenecks of high costs, difficulty in collecting scenarios, and limited coverage in real-world testing. In terms of technical architecture, the platform typically consists of core modules such as environment modeling, sensor simulation, vehicle dynamics modeling, perception algorithm testing, and V2X communication.
