Abstracts

The global Autonomous Driving Simulation Platform market size is expected to reach \$ 1792 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

An autonomous driving simulation platform is a virtual testing system that accurately recreates the real driving environment in the digital world. Its core value lies in enabling autonomous driving systems to 'directly hit the road' in a virtual city, experiencing a vast array of diverse road, weather, and traffic scenarios. This fundamentally solves the bottlenecks of high costs, difficulty in collecting scenarios, and limited coverage in real-world testing. In terms of technical architecture, the platform typically consists of core modules such as environment modeling, sensor simulation, vehicle dynamics modeling, perception algorithm testing, and V2X communication.

This report studies the global Autonomous Driving Simulation Platform demand, key companies, and key regions.
