Abstracts

The global Autonomous Drone Surveillance Platform market size is expected to reach \$ 843 million by 2032, rising at a market growth of 9.9% CAGR during the forecast period (2026-2032).

An Autonomous Drone Surveillance Platform refers to an integrated drone-in-a-box system combining UAVs, automated docking/charging stations, mission-control software, AI video analytics, remote operations and data-management modules. It is mainly used for perimeter security, industrial inspection, infrastructure monitoring, ports, energy facilities, mining sites, borders and emergency response. In 2025, Global Autonomous Drone Surveillance Platform shipments are estimated at about 9,500 Sets, with an average ex-works system price of 45,000 US\$/Set.

Growth is driven by demand for unmanned inspection and continuous perimeter surveillance. Fixed cameras often leave blind spots across large industrial sites, ports, oil and gas facilities and mining areas, while drone-in-a-box systems can launch automatically on schedule or in response to alarms. Adoption is further supported by BVLOS operations, AI detection, thermal night monitoring, digital inspection records and labor-cost reduction, although regulation, cybersecurity, airspace control and reliability still constrain faster scale-up.

This report studies the global Autonomous Drone Surveillance Platform demand, key companies, and key regions.
