## Abstracts

According to our (Global Info Research) latest study, the global Autonomous Golf Ball Picking Robots market size was valued at US\$ 84.4 million in 2024 and is forecast to a readjusted size of USD 165 million by 2031 with a CAGR of 9.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Autonomous Golf Ball Picking Robots are intelligent service robots that integrate mechanical design, automatic control, pattern recognition and artificial intelligence technologies. Through adaptive mechanical structure, multi-sensor positioning system and machine vision algorithm, they can independently complete golf course ball recognition, path planning, obstacle avoidance, precise picking and classified storage tasks without human intervention. They can not only collect scattered balls and transport them to designated locations in an automated patrol, but also automatically execute the ball collection process after being started by staff through human-computer interaction until the ball is fully loaded and returned, effectively solving the safety risks and efficiency bottlenecks of manual collection during operating hours, significantly reducing labor costs and improving golf course operating efficiency.
