Abstracts

According to our (Global Info Research) latest study, the global Autonomous Industrial Inventory-Tracking Drone market size was valued at US\$ 570 million in 2025 and is forecast to a readjusted size of US\$ 1596 million by 2032 with a CAGR of 16.1% during review period.

Autonomous industrial inventory-tracking drones are unmanned aerial systems designed for automated inventory scanning and tracking in indoor industrial environments such as warehouses, distribution centers, and manufacturing facilities. Equipped with technologies such as computer vision, RFID scanning, LiDAR-based navigation, and AI-driven flight control, these drones can autonomously navigate complex indoor spaces to scan barcodes, identify inventory locations, and synchronize data with warehouse management systems (WMS) or enterprise resource planning (ERP) platforms. From a value chain perspective, upstream includes drone hardware components (motors, batteries, sensors, cameras), navigation and AI chips, and communication modules; midstream involves drone manufacturing, software development, system integration, and autonomy algorithms; downstream demand comes from logistics providers, e-commerce warehouses, manufacturing plants, and third-party warehousing operators. In 2025, the average selling price is approximately US\$10,500 per unit, with global shipments around 52,800 units. The industry maintains gross margins of 32%-48%, supported by integrated hardware-software solutions, customization requirements, and service-based revenue models.
