Abstracts

The global Autonomous Logistics Truck market size is expected to reach \$ 1707 million by 2032, rising at a market growth of 34.7% CAGR during the forecast period (2026-2032).

An autonomous logistics truck solution is an integrated autonomy offering for freight operations (line-haul, middle-mile, yards/terminals), spanning production L2+/L3 ADAS to constrained-ODD L4 trucking. It typically combines sensors (camera/radar/LiDAR-optional), onboard compute/domain controllers, localization/maps, perception-prediction-planning-control software, drive-by-wire and safety redundancy, plus fleet operations (remote supervision/tele-assist, dispatch, TMS/WMS integration, OTA and data pipelines) to meet fleet-grade safety, uptime, and on-time performance.

The upstream is hardware and vehicle platform (sensors, compute/domain controllers, drive-by-wire actuators, power/comms, functional safety & cybersecurity components); downstream customers (carriers, shippers, logistics yards/terminals, and truck OEMs for factory fit).

This report studies the global Autonomous Logistics Truck demand, key companies, and key regions.
