According to our (Global Info Research) latest study, the global Autonomous Mining Truck Solution market size was valued at US\$ 684 million in 2025 and is forecast to a readjusted size of US\$ 6016 million by 2032 with a CAGR of 36.7% during review period.

An Autonomous Mining Truck Solution is a closed-site autonomy stack for mine haul trucks (and sometimes underground trucks) operating within a defined ODD, combining onboard perception-planning-control and high-precision localization with fleet supervision/traffic management and remote monitoring to automate haul cycles between loading and dumping points, improving safety, consistency, and utilization while integrating with mine operations systems.

The value chain typically spans vehicle hardware (drive-by-wire, sensors, GNSS-RTK/INS, automotive compute with redundancy), autonomy software (perception-prediction-planning-control, functional safety/cybersecurity, simulation/OTA), and site-level systems (control center, fleet supervision/traffic management, integration with mine dispatch/FMS) plus long-term O&M.
