Abstracts

The global Autonomous Mining Truck Solution market size is expected to reach \$ 6016 million by 2032, rising at a market growth of 36.7% CAGR during the forecast period (2026-2032).

An Autonomous Mining Truck Solution is a closed-site autonomy stack for mine haul trucks (and sometimes underground trucks) operating within a defined ODD, combining onboard perception-planning-control and high-precision localization with fleet supervision/traffic management and remote monitoring to automate haul cycles between loading and dumping points, improving safety, consistency, and utilization while integrating with mine operations systems.

The value chain typically spans vehicle hardware (drive-by-wire, sensors, GNSS-RTK/INS, automotive compute with redundancy), autonomy software (perception-prediction-planning-control, functional safety/cybersecurity, simulation/OTA), and site-level systems (control center, fleet supervision/traffic management, integration with mine dispatch/FMS) plus long-term O&M.
