According to our (Global Info Research) latest study, the global Autonomous Mobile Welding Robot market size was valued at US\$ 23.2 million in 2024 and is forecast to a readjusted size of USD 37.3 million by 2031 with a CAGR of 7.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

An autonomous mobile welding robot is a self-navigating robotic system designed to perform welding tasks without direct human control. It integrates mobility (typically via wheels or tracks), sensors (such as LiDAR and cameras), and artificial intelligence to map environments, plan paths, and carry out precise welding operations in dynamic or complex industrial settings. These robots are widely used in construction, shipbuilding, pipeline maintenance, and manufacturing, where they improve efficiency, consistency, and safety by operating in hazardous or hard-to-reach areas. Their autonomy allows them to adapt to changing environments and reduce the need for extensive human supervision or fixed infrastructure.
