The global Autonomous Ride-hailing Service market size is expected to reach \$ 7331 million by 2032, rising at a market growth of 19.5% CAGR during the forecast period (2026-2032).

Autonomous ride-hailing services refer to an on-demand travel service model that provides users with unmanned transportation through mobile applications or platforms, based on autonomous driving technology. After users place an order via their mobile phones, driverless vehicles automatically complete the entire process of pickup, driving, and delivery, relying on high-precision maps, sensors, artificial intelligence algorithms, and cloud-based dispatch systems to ensure safe operation and route optimization. This service integrates shared mobility and intelligent driving technologies, representing a significant upgrade from traditional ride-hailing services to unmanned and intelligent operations.

Autonomous ride-hailing services are considered a crucial future direction for urban transportation, possessing significant potential for cost reduction, efficiency improvement, and enhanced travel safety. On one hand, autonomous driving can reduce reliance on human drivers, lower operating costs, and increase fleet utilization; on the other hand, with the decreasing costs of artificial intelligence and sensors, and the gradual improvement of regulations, this model is moving from pilot operations to commercialization. In the future, with increased technological maturity, greater public acceptance, and the advancement of smart city construction, autonomous ride-hailing services are expected to rapidly penetrate urban travel, airport shuttles, and park transportation scenarios. However, issues such as safety supervision, liability definition, and infrastructure support still need to be addressed. Overall, the industry is in its early stages of rapid growth, with enormous long-term growth potential.
