The global Autonomous Robotic Lawn Mower market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An autonomous robot lawn mower is an automatic lawn mowing device with an intelligent control system, which can autonomously identify and plan lawn areas and trim them according to the set procedures. Autonomous robotic lawn mowers usually use batteries as a power source, and are equipped with smart devices such as sensors and navigation systems, and have functions such as automatic obstacle avoidance and automatic recharging. The main components of an autonomous robotic lawn mower include batteries, motors, blades, sensors, navigation systems, and more. When in use, install the battery on the machine and charge it. After starting the machine, it will automatically detect the shape and size of the lawn and formulate a special trimming plan. It has strong autonomy, high intelligence, low noise, saves time and Manpower, high security characteristics.
