## Abstracts

According to our (Global Info Research) latest study, the global Autonomous Robots in Factories market size was valued at US\$ 4138 million in 2025 and is forecast to a readjusted size of US\$ 17934 million by 2032 with a CAGR of 26.3% during review period.

In 2025, the global output of Autonomous Robots in Factories is expected to reach 1.058 million units, with an average selling price of USD 3,800 per unit, production capacity of 1.285 million units, and an average gross margin of 31.8%.

Autonomous Robots in Factories refer to intelligent robotic systems deployed in manufacturing plants, warehouses, and internal industrial logistics environments, capable of independently performing path planning, obstacle avoidance, material handling, picking, inspection, and collaborative operations through sensors, vision systems, AI algorithms, and autonomous navigation technologies (such as AMR, AGV, and SLAM). Their core feature is the ability to operate without continuous human intervention while integrating with industrial systems such as MES, WMS, and ERP, making them essential components of Industry 4.0 and smart manufacturing.

The upstream of the Autonomous Robots in Factories industry mainly includes suppliers of core components and technologies such as servo motors, reducers, LiDAR, industrial cameras, controllers, battery systems, navigation modules, and AI algorithm platforms. The midstream consists of robot manufacturers and system integrators responsible for robot body development, software integration, and factory deployment. The downstream mainly covers automotive manufacturing, electronics manufacturing, semiconductors, food and beverage, pharmaceuticals, warehousing logistics, and heavy industries,

where internal logistics automation and flexible manufacturing are the major demand drivers.
