## Abstracts

The global Autonomous Small Manned Aerial Vehicle (SMAV) market size is expected to reach \$ 1464 million by 2032, rising at a market growth of 43.9% CAGR during the forecast period (2026-2032).

Autonomous small manned aerial vehicles refer to piloted self-flying aircraft designed for low-altitude travel, sightseeing, shuttle, and emergency scenarios. They typically feature multicopter, compound wing, or tilt-rotor configurations, with capabilities including vertical takeoff and landing, preset route flight, autonomous navigation, remote monitoring, and redundant safety controls. Their operation does not rely on an onboard pilot, but is managed through flight control systems, ground command platforms, and airspace management systems. In 2025, the global market size is estimated at approximately USD 100 million.

The autonomous small manned aerial vehicle market is currently a small-scale, policy-driven, and highly regulated early-stage market. In 2025, the global market remains limited, primarily supported by the Chinese market and deliveries of the EHang EH216-S.

Starting in 2026, with the issuance of commercial operation licenses, low-altitude economy policies, and the implementation of demonstration routes in scenic areas and cities, the market is expected to shift from “prototype validation and demonstration purchases” to “small-batch deliveries driven by operational scenarios.”

Significant market expansion for autonomous small manned aerial vehicles is expected after 2027–2030, once more companies complete airworthiness certification, route

approvals, and operational safety validation.
