Abstracts

The global Autonomous Sweeper market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Autonomous sweeper is a type of urban sanitation vehicle.

Autonomous sweepers mainly use self-driving sweepers to replace traditional sanitation vehicles to achieve road cleaning on open roads or closed roads.

At present, the price of Autonomous sweepers is on the high side, and compared with traditional manpower, the price advantage is not obvious. In the future, with the localization and large-scale production of key components (such as lidar), the cost of Autonomous sweepers is expected to decrease. At the same time, with the commercialization of L4 level autonomous driving technology, labor costs will further decline, and Autonomous sweepers are expected to be promoted and used on a large scale.

This report studies the global Autonomous Sweeper production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Autonomous Sweeper, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
