Abstracts

Autonomous transport systems provide the unmanned transfer of resources, people, baggage or information from point to point with minimal human intervention. Unlike autonomous transport vehicles, which are solitary trucks or cars used by an individual, an autonomous transport system is made of interconnected technology and software. These systems may include self-driving vehicles, but the focus is more on how those vehicles work with other technologies, such as an Application Programming Interface, to complete varied tasks, such as delivering lab samples from one part of a hospital to another using autonomous transport robots.

According to our (Global Info Research) latest study, the global Autonomous Transport Robots market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
