Abstracts

The global Autonomous Truck Platooning System market size is expected to reach \$ 3703 million by 2032, rising at a market growth of 37.5% CAGR during the forecast period (2026-2032).

An autonomous truck convoy system is a convoy-level cooperative automation solution for freight corridors. It combines onboard ADAS/automated longitudinal control with V2V/V2X connectivity and cooperative control (often CACC) to enable formation/join/leave, cooperative gap & speed control, coordinated braking, and safe fallback under cut-ins or comms loss, with a roadmap from driver-support platooning toward higher-autonomy convoy operations.

The supply chain spans vehicle OEM platforms, Tier-1 safety/actuation (braking, ADAS controllers), V2V/V2X connectivity and cybersecurity, plus platoon/convoy software (CACC, platoon management, safe fallback) and fleet operations (dispatch, monitoring).

This report studies the global Autonomous Truck Platooning System demand, key companies, and key regions.
